VERMEG

Solife Suite 7

Welcome to this new issue of VERMEG's Solife quarterly newsletter. We aim to keep you informed on what VERMEG is achieving and envisioning.

The Solife team is pleased to announce that it released the S7.4 on September 15th, 2020. This version includes a larger API catalog **to accelerate and streamline front-end deployments** with a new list **of REST APIs** to manage Client profiles. In addition, S7.4 is now completely compatible with **JDK11.**
Just like the previous one, this version is cloud-compliant as more and more clients consider a shift to Solife on the public cloud.

Modular Offer

The insurance offer is expanded with a new stand-alone component: **Pricing.** It is a new module for life and non-life insurance. It has a full microservices architecture, a configuration screen developed in Angular and is fully covered by automatic testing. It is based on a configurable catalog, has evolutive technical bases in coverage pricing, 2-Directions pricing mode (risk value to premium and premium to risk value), a multi-layer premium calculation, and integrated testing tools.

Collective Offer

The business scope includes:

/ Subscription process with pricing based on statistics
/ Subscription process with pricing on a packaged offer
/ Subscription process with pricing on flexible offer

New Non-Life Offer

VERMEG continues to offer additional digital journeys to its clients. The latest one is a non-life Digital Journey **decoupled from our back end.** It is also the result of a common approach with our clients to build a new interface based on their legacy systems.

Upcoming

Solife's roadmap reflects VERMEG's ambitious vision when it comes to providing a new Digital journey. It is also the result of many discussions with our clients who expressed their new needs and shared with us their own vision of how they wish to evolve.

As such, the upcoming standard release in March 2021 will include a **New UI** developed in Angular. **A new back-office oriented digital layer** with simple screens, native guidance and requiring very little training.

Did you know?

VERMEG can help you digitize your solutions. As such, VERMEG has developed a seamless end-to-end digital insurance journey that meets your end customers' expectations. The journey combines analysis, customer knowledge, and artificial intelligence to enable you to increase sales performance and meet your customers' expectations, strengthening your relationship with your base customers and ensuring their loyalty.

Don't forget that we have a recently-updated training catalogue for our clients and implementation partners around our offer.
